

The Linux Phone App Ecosystem

RELOADED

Apps for Sailfish OS, Ubuntu Touch and
their new-ish contenders
and plans for LinuxPhoneApps.org

This could be so simple!

- Install Waydroid on your distribution
<https://docs.waydro.id/usage/install-on-desktops>
- Install F-Droid from f-droid.org
- Maybe install Aurora Store or go with Google Apps
- Have all the apps!*

* well, almost, issues with BT, Cam, Safety Net and so on would remain

[Weekly GNU-like Mobile Linux Update \(04/2024\): Ubuntu Touch OTA 4 + FOSDEM preparations](#)

With [FOSDEM 2024](#) approaching, let's have another roundup: Ubuntu Touch 20.04 OTA 4, gmobile 0.0.5, an update on progress in Nemo Mobile (plus a Qt6-based image to try out), a healthy "Worth Reading" section, another episode of the postmarketOS podcast and sadly not much of a video section.

Also, one ask: [Please part-take in this pseudo-survey](#) - thank you!

Hello World!

Sep 24, 2007 • [peter](#) • [internal shortform](#)

This is my first post—I am a german guy, who likes linux-powered mobile phones a lot and due to this, some of these phones will be the subject here.

I had a blog over at some other place before, but it is gone now, unfortunately. If the hoster sends me my old texts, I will import them in here.

Addendum, April 15th, 2021: *This original blog had been hosted at Motorolafans.com, a forum where Motorola's Linux phones were discussed. Their blog feature just disappeared, and the contents could never be recovered. Looking back at my early posts, this was not a huge loss.*

 Share this post on [Twitter](#), [Reddit](#), [Hacker News](#), [LinkedIn](#) or via [Email](#).

How it started

I found this

MGLApps

Mobile GNU/Linux Apps

Mobile GNU/Linux Apps (short: MGLApps) is a list of (potential) applications for usage on mobile devices running GNU/Linux, having small(er) screens and touch input (e.g. smartphones, tablets, convertibles).

Project repository: <https://framagit.org/mglapps/mglapps.frama.io>

Adjust table

Search:

name	category	summary	mobile compatibility	repository	framework
 1010! Klooni	game	"libGDX game based on the original 1010!"		https://github.com/LonamiWebs/Klooni1010	libGDX
 Alligator	feed reader	"Alligator is a convergent RSS/Atom feed reader."	0	https://invent.kde.org/plasma-mobile/alligator	Kirigami
 Angelfish Webbrowser	browser	"experimental webbrowser"	0	https://invent.kde.org/jbbgameich/plasma-angelfish	
 Apple Flinger	game	"Funny single- and multiplayer game for Android - Use a slingshot to shoot with apples. Very challenging and addictive."		https://gitlab.com/ar-apple-flinger	libGDX
 Authenticator	2FA code generator	"Two-factor authentication code generator for GNOME. Created with love using Python and GTK+."	0	https://gitlab.gnome.org/World/Authenticator	GTK, libhandy
 Banking	banking	"Banking application for small screens"		https://gitlab.com/tabos/	GTK

Part One

The Linux Phone (App)
Ecosystem

Motivation

The space is a tiny niche, that may or not be stronger due to being heavily fragmented.

Goals

- encouraging more collaboration
- learning from what other projects do
- *personal*: spending some time with Ubuntu Touch and Sailfish OS ;-)

Assumptions

- apps for open standards should be implementable
- apps for services with free API access too
- apps for services that have an api should be doable

Sailfish OS

- risen from the ashes of Nokia and Meego
- 2013: Jolla Phone
- Wayland, btrfs, systemd - in 2013
- latest release: 4.6.0.11 (Sauna) / 20 May 2024
- Jolla C2 will come with 5.0
- Sailfish X - buy license, bring a Sony device
 - moving to subscriptions
- Android App Support

“ Open source with added closed-source components and extensions of third parties which can be of other licences as well

https://en.wikipedia.org/wiki/Sailfish_OS

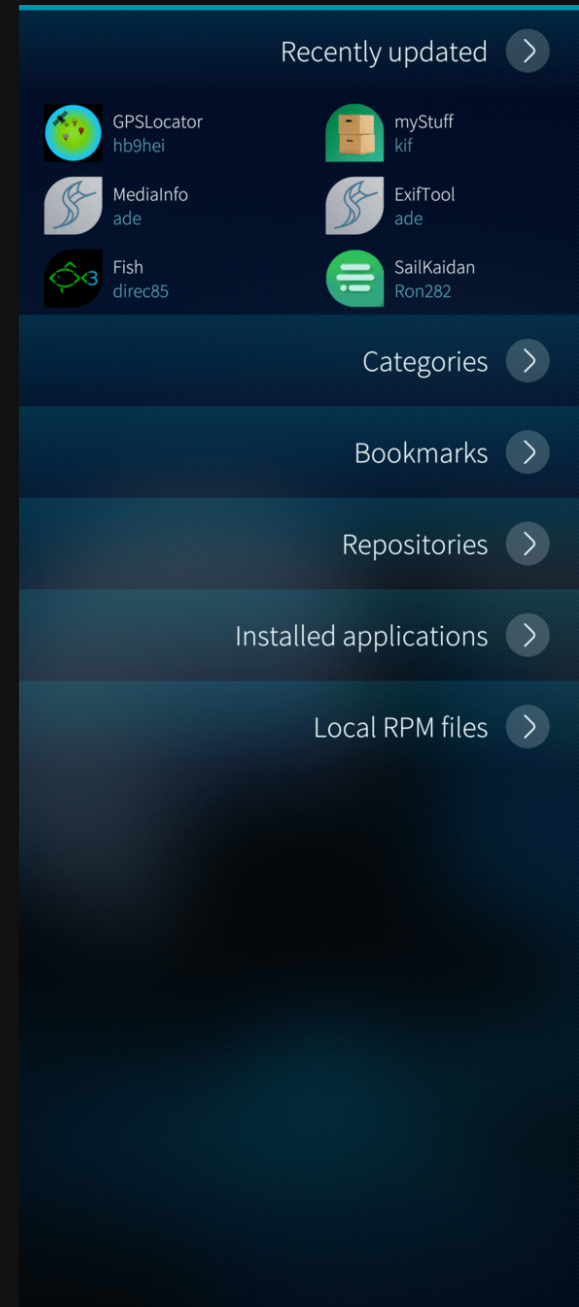

Jolla Store

- requires Jolla account
- no for pay apps
- no web interface, did not count

openrepos.net

- Storeman frontend
- no for pay apps
- also list apps for other projects
- ~2000 apps listed for Sailfish OS

Chum

- the newest contender
- also has a [web frontend](#)
- no for pay apps
- ~190 apps listed for Sailfish (+ 20 compared to February)
- including [Kirigami](#) apps (23.04 release)!

Sailfish Highlights

According to our poll,

- [Pure Maps](#),
- [Whisperfish](#) (Signal client),
- [Fernschreiber](#) (Telegram),
- [Sailfish Connect](#)

are highlights!

Also, with [Contrac](#), SFOS had the only #MobileLinux Covid19 contact tracing app.

Ubuntu Touch

- envisioned in 2011
- 2015: bq Aquaris E4.5
- Mir, Upstart, Unity 8
- read only rootfs
- dropped by Canonical and continued by UBports in April 2017. Unity 8 is now Lomiri, Mir does Wayland too now and 20.04 uses systemd
- latest release: 20.04 OTA 4 / 30 January 2024

“ Mark Shuttleworth announced on 31 October 2011 that by Ubuntu 14.04, the goal was that Ubuntu would support smartphones, tablets, smart TVs and other smart screens (such as car head units and smartwatches)

https://en.wikipedia.org/wiki/Ubuntu_Touch

Open-Store

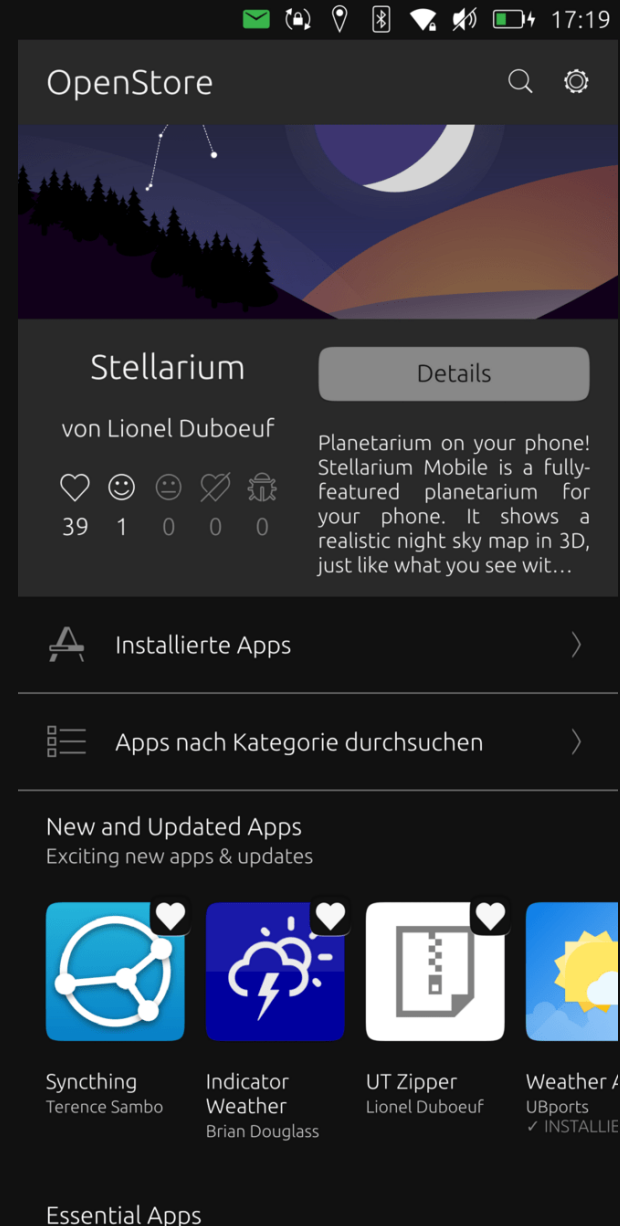

- <https://open-store.io/>
- App Count 16.04
 - Apps ~610
 - Web Apps ~210
- App Count 20.04
 - Apps ~210
 - Web Apps ~22

Numbers: Late January 2024

Other ways to install apps

- Inside a Ubuntu container - **Libertine**
- this is mainly useful for tablets, as 16.04 and 20.04 contain few mobile friendly apps in their repositories
- **Snapz0r**: Install Snaps on Ubuntu Touch
- both: bring your own env, or things may be tiny ;-)

Highlights

- uMastonauts (poll)
- Webber (web app creation)
- Dekko (E-Mail)
- uNav (navigation)

More interesting apps

- [LinPhone](#) (16.04 only)
- [Fluffychat Flutter](#) (dito)
- [Scooter](#) (Bird and Nextbike)
- [Tesla app](#)
- [NoStrut](#) (only #LinuxMobile Nostr client, afaik)
- [Futify](#) (Spotify Premium client)

Gaps (poll + from experience)

- [Matrix apps on 20.04](#) (beyond adaptations of Element Desktop and Cinny)
- [XMPP](https://conversejs.org/) beyond <https://conversejs.org/>
- (Desktop) Firefox for Ubuntu Touch (poll)

"New" contenders

New contenders

- 2017/2020 ff. Librem 5 / PinePhone
- lots of projects based on desktop distributions
- PureOS, postmarketOS, Mobian, Manjaro - to just name a fraction of what came up
- Main UIs: Plasma Mobile, Phosh, GNOME Shell Mobile
- No proper app store solution (ish)
- hence [LinuxPhoneApps.org](https://linuxphoneapps.org)

See <https://linmob.net/resources> for links.

All Frameworks

AppStream Metadata

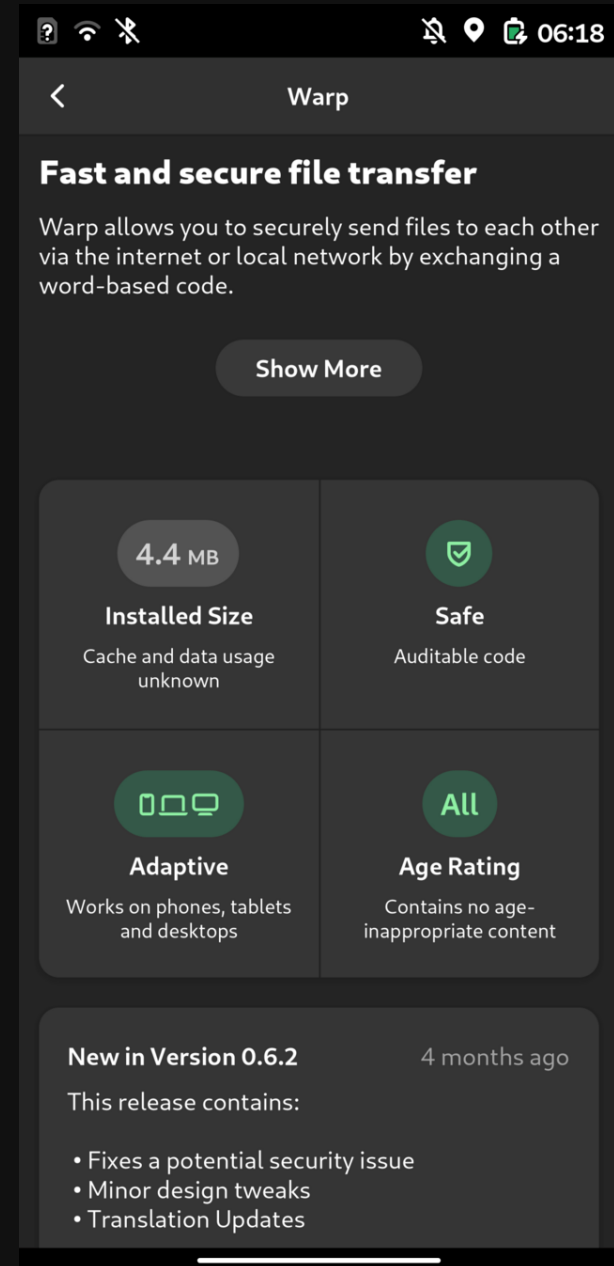

- specified by FreeDesktop.org
- may seem boring, but is super important
- can contain
 - licensing, descriptions, release notes
 - form factor information
 - ...
- [Blog post on Form factors](#)
- [AppStream Documentation](#)
- [Metainfo Creator](#)

GNOME Software

- Can show whether apps are adaptive according to metadata
- [PureOS Store](#) (fork) has toggle to only show adaptive apps

UI: GTK4 / libadwaita

(LPA.org lists 207 [libadwaita](#) apps + 66 [libhandy](#) apps)

Highlights (GNOME)

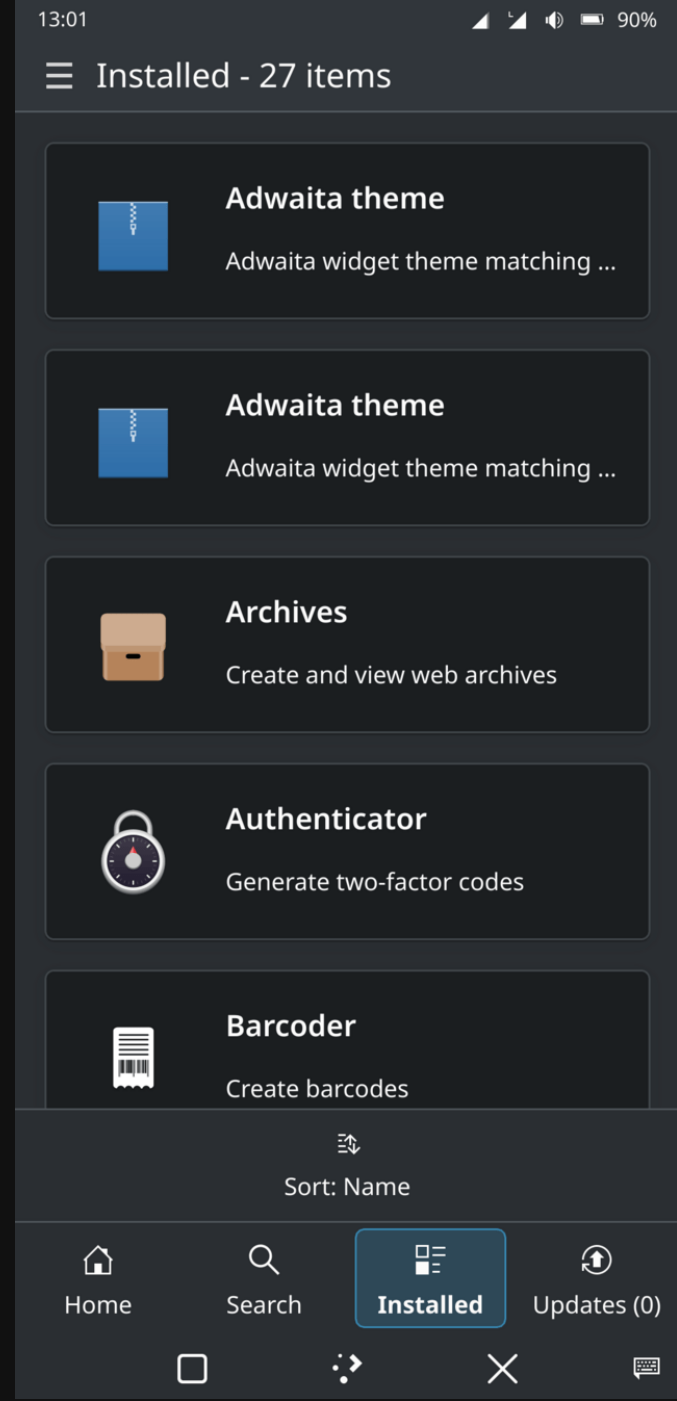

- [Chats/Calls](#) (duh)
- [Tuba](#) (Fediverse Client)
- [Tangram](#) (Web Apps)
- [Dino](#) (XMPP)
- [Fractal](#) (Matrix)
- [Railway](#)
- [Wike](#) (Wikipedia)
- [Spot](#) (Spotify Premium)
- [Flatseal](#) (Flatpak permissions and env mgmt)

KDE Discover

Does not do this (yet.)

But: It uses Kirigami and is adaptive!

LPA.org lists 117 [Kirigami apps](#) and some more apps that just use Kirigami and MauiKit or QtQuick and should work "as native" on Plasma Mobile

Highlights (Plasma)

- [Phone apps](#)
- [Kasts](#) - feature-rich podcast app
- [Itinerary](#) (travel companion)
- [Angelfish](#) (mobile web browser)
- [Tokodon](#) (Fediverse client)
- [Pure Maps](#) (Kirigami)

Highlights (Other)

- [Nheko](#) (Matrix)
- [Fluffychat](#) (Matrix)

Special: Apps that run everywhere

- Pure Maps
- Amazfish
- Kaidan*

Generally, building a Qt app with QtQuick Components 2 might lead to something portable, but what do I know ;-)

Special: Apps that run everywhere

There's more

Here are a few more long-lived Linux Mobile Projects that were not mentioned in this talk:

- [Maemo Leste](#) (has its own app store)
- [Nemo Mobile](#)
- [Lune OS](#) (webOS revived)

Poll results

Find them at
<https://linuxrocks.online/@linuxphoneapps/111796292510471036>

Gaps (Poll in February)

- Poll results
 - WhatsApp
 - Banking apps (likely various), NFC payments
 - Maps/Navigation (Organic Maps/osmAnd/Waze)
 - decent E-Mail app (Geary is close)
 - apps for Electric vehicles
 - apps for new mobility (Scooters and such)
 - camera app working on all devices
 - crypto-currency wallets

More Current gaps

- Attention grabbing Social Media
- Office clients ([Libre Office](#) - Collabora Office Online works fine in Firefox though)
- ...

Frequent annoyances

- Please, if you maintain an app, do release it some point
- Flutter apps built only for x86_64 Linux
- Electron apps built only for x86_64 Linux (WTF, Signal?)
- Generally apps only built for x86_64 Linux!

qemu/binfmt to the rescue?

Future Challenges

- Application of more and more public and private services
- E.g., in Germany:
 - DHL Packstation (in 2023)
 - BahnCard (soon)

Solution?

- virtualized Android
- reverse engineer all the things ;-)

AND / OR

- We need to push government to keep important services accessible to people without smartphones by just two platform vendors
 - technical solution: The Web.

Stuff I would like to see

- More cross-project collaboration in the app space
- Better App Metadata
- Make access to non-distro app sources easier in distributions
- Donation nagging in other App install things
- A bug tracker like Mozilla's **Platform Tilt**
- Help with LinuxPhoneApps.org ;-)

Conclusions

- I hope this wasn't too overwhelming or boring
- There may be more apps, than you'd think
- Regarding initial Assumptions: Nope, people just scratch their itch :-)

Please check it out and ... all help is appreciated

- As always, the README is a good starting point
<https://framagit.org/linuxphoneapps/linuxphoneapps.frama.io/-/blob/main/README.md>
- Create listings with
https://linuxphoneapps.org/lpa_helper.html
- or just check things that are wrong,
<https://linuxphoneapps.org/tags/no-appstream-metadata-manual-maintenance/> may be a good starting point

Plans for the remainder of 2024

- make it a well working progressive web app
- fix design and template issues
- come up with ways to programmatically figure out
 - when an app saw its newest release
 - or latest commit
 - which UI framework an app uses (to see if a GTK3 app is now GTK4)
 - ...

Thank you!

- <https://linuxphoneapps.org/>
- fosdem-talk@linmob.net
- <https://floss.social/@linuxphoneapps>

and, if you want to contribute

- <https://framagit.org/linuxphoneapps/linuxphoneapps.frama.io/-/issues>
